The American Journal of Physiology-Gastrointestinal and Liver Physiology reports the rapid changes taking place in gastrointestinal and liver research. Exciting new developments in the basic concepts of cell and organ function and new approaches in cell and molecular biology are reported while maintaining the traditional focus on physiology.

The journal's broad scope includes comprehensive coverage of normal and abnormal functions of the gastrointestinal tract, liver, pancreas, gallbladder, and salivary glands. Special features include subject table of contents and theme articles featuring concise, insightful perspectives.

With so many rapid changes taking place in the field, a subscription to *American Journal of Physiology-Gastrointestinal and Liver Physiology* is a must for all serious researchers in this area.

Authors are required to submit papers online at www.apscentral.org.

Special Features Include:
- Sign-up for e-mail notification of advance tables of contents
- Fully searchable text, including PubMed
- Rich color and sharp resolution of figures
- Editor's Home Page: www.the-aps.org/publications/ajpgi
- Articles in Press: Accepted research papers are now published online within a few days after their acceptance.
- Perpetual/Electronic Archiving: The LOCKSS system preserves the electronic content of all APS journals.

Special APS Member Benefits:
- FREE Online Access to 15 APS journals and APS Journal Legacy Content: Members of the American Physiological Society (APS) receive free online access to both the current content and legacy content (going back as far as 100 years for some journals) of these APS research journals (this free online access includes *American Journal of Physiology-Gastrointestinal and Liver Physiology*).
- FREE Color Figures: Regular and Emeritus Members of APS who are first or last authors receive free color figures in all APS journals.

The Journal Publishing Program of the American Physiological Society (APS) covers the entire spectrum of physiology—examining major physiological systems, from the cellular and molecular to the organ and system level. These prestigious peer-reviewed journals are available in print and online. An online subscription to the APS journals provides you with immediate access to the latest issue of the journal as well as with continued access to all content published previously online. Subscribers to the online journals also get access to the fastest possible publication of original research articles through our Articles in Press feature—articles published in manuscript form within a few days of acceptance. The APS journal titles are:

- American Journal of Physiology (AJP consolidated)
- AJP-Cell Physiology
- AJP-Endocrinology and Metabolism
- AJP-Gastrointestinal and Liver Physiology
- AJP-Lung Cellular and Molecular Physiology
- AJP-Heart and Circulatory Physiology
- AJP-Regulatory, Integrative and Comparative Physiology
- AJP-Renal Physiology
- Journal of Applied Physiology
- Journal of Neurophysiology
- Physiological Genomics
- Physiological Reviews
- Physiology (formerly News in Physiological Sciences)
- Advances in Physiology Education

The APS Journal Legacy Content

FREE to APS Members  One-Time Fee of $2,000 ...to Nonmembers

This Legacy Content is available online only and can be purchased separately at a one-time charge. This Legacy Content is free to APS Members (except Affiliate Members). It is a separate program from the Subscription Program in that you pay once ($2,000) for the perpetual access to the online content of 14 APS journals from 1898 to 1996-1998 (depending on the journal). This content goes back to the first issue of each of the APS journals—including APS’s first journal in 1898, the American Journal of Physiology. This Legacy Content can be viewed as completely searchable scanned images of the printed pages.
The American Physiological Society (APS) offers free-of-charge access to the full text of articles (approximately 20,000 articles) published in our online journals after only 12 months from the publication date (going back to 1997).

Our large and growing library of physiology research is available to anyone with internet access. The journal publishing program of The American Physiological Society covers the entire spectrum of physiology—examining major physiological systems from the cellular and molecular to the organ and system level. All APS journals are available in print and online. Online subscriptions include free-of-charge online search capabilities extending to over 350 outstanding biomedical journals published online by HighWire Press.

I. Pathophysiological basis and prospects for probiotic therapy in inflammatory bowel disease

F. Shanahan

SIGNAL TRANSDUCTION PATHWAYS THAT REGULATE SMOOTH MUSCLE FUNCTION

I. Signal transduction in phasic (esophageal) and tonic (gastroesophageal sphincter) smooth muscles
K. M. Harnett, W. Cao, and P. Biancani

II. Receptor-ion channel coupling mechanisms in gastrointestinal smooth muscle
H. I. Akbarali

III. Coupling of muscarinic receptors to signaling kinases and effector proteins in gastrointestinal smooth muscles
W. T. Gerthoffer

EPITHELIAL CELLS AND THEIR NEIGHBORS

I. Role of intestinal microfibroblasts in development, repair, and cancer
D. W. Powell, P. A. Adegboyega, J. F. Di Mari, and R. C. Mifflin

II. New perspectives on efferent signaling between brain neuroendocrine cells, and gut epithelial cells
G. Flemström and M. Sjöblom

III. Interactions between intraepithelial lymphocytes and neighboring epithelial cells
W. L. Havran, J. M. Jameson, and D. A. Witherden

IV. Bacterial contributions to intestinal epithelial barrier integrity
A. Ismail and L. V. Hooper

GASTROINTESTINAL STEM CELLS

I. Pancreatic stem cells
B. Soria, F. J. Bedoya, and F. Martin

II. Intestinal stem cells
M. Bjerknes and H. Cheng

III. Emergent themes of liver stem cell biology: niche, quiescence, self-renewal, and plasticity
N. D. Theise

IRON IMPORTS

I. Intestinal iron absorption and its regulation
D. M. Frazer and G. Anderson

II. Iron uptake at the apical membrane in the intestine
B. MacKenzie and M. D. Garrick

III. Transfer of iron from the mucosa into circulation
M. Wessling-Ressnick and E. Nemeth

IV. Hepcidin and regulation of body iron metabolism
T. Ganz

V. Transport of Iron through the intestinal epithelium
Y. Ma, M. Yeh, K.-Yih Yeh, and J. Glass

LIPID METABOLISM AND LIVER INFLAMMATION

I. Hepatic fatty acid uptake: possible role in steatosis
M. W. Bradbury
